A. Personal Statement

My research is based on patient-specific (PS) mathematical models of cancer growth and response to therapy. Specifically, I consider how routinely collected clinical data can be used to parameterize PS models that can provide biological insight and clinically relevant predictions of individual disease behavior. I recently completed my Ph.D. in Applied Mathematics from the University of Washington, with my dissertation titled "Towards Patient-Specific Mathematical Radiation Oncology." My thesis establishes a framework for PS modeling of tumor growth and response to radiation therapy, built entirely upon routinely collected MRI data.

My research goal is to test the general hypothesis that patient-specific mathematical models can quantify and predict disease behavior and recurrence following therapy *in vivo*, in individual patients. To this end, I have already made significant contributions to PS model parameterization and prediction, with patented algorithms as well as first and senior author level peer reviewed publications. More broadly, my research career aims towards further biological validations and clinical applications of PS mathematical models of tumor growth and response to therapy. I have received 2 national awards for 1st author research works, been awarded one patent, published 13 research articles and produced 51 conference abstracts (16 as first author) all during the course of my Ph.D. Research works which include me as an author have been cited over 450 times with an h-index of 10 and an i-10 index of 10, calculated with google scholar.

Current Job Responsibilities and Experience

In addition to my own research, I manage the day to day activities of over \$1 million (direct costs) annual research funding with Kristin Swanson as the PI.

- I supervise research staff and students at all levels from undergraduate to post-doctoral fellows
- I establish scientific goals and milestones in accordance with grant directives and reporting deadlines
- I present research to domestic and international biomedical and mathematical societies
- I contribute to all aspects of grant preparation including budget, budget justification, specific aims, research plan, facilities and resources and all NIH required sections. I also have experience with private foundations, as well as R01, U54, U01, R21, DP5 and K award grant mechanisms
- I have designed and implemented large scale data and analysis workflow systems
- I manage and author IRB research protocols, renewals, modifications and approval processes
- I organize the Mathematical Neuro-Oncology lecture series – including identifying and inviting speakers
